**Bayes Theorem** 

**State and Prove Bayes Theorem** 

#### **(OR)**

State and Prove Theorem of Probability of Causes.

Statement

If  $B_1, B_2, ..., B_n$  be a set of exhaustive and mutually exclusive events associated with random experiment and A is another event associated with (or caused )by Bi. Then

$$P(A \mid B_i) = \frac{P(B_i) \cdot P(A/B_i)}{\sum_{i=1}^{n} P(B_i) P(A/B_i)}$$

**Proof:** 

Given  $B_1, B_2, ..., B_n$  are mutually exclusive events

 $A \cap B_1, A \cap B_2, \dots, A \cap B_n$  are mutually exclusive events

Let  $A = (A \cap B_1) \cup (A \cap B_2) \cup \ldots \cup (A \cap B_n)$ 

By addition theorem,

$$\Rightarrow P(A) = P(A \cap B_1) + P(A \cap B_2) + \dots + P(A \cap B_n)$$

 $\Rightarrow P(A) = \sum_{i=1}^{n} P(A \cap B_i)$ 

$$\Rightarrow P(A \cap B_i) = P(B) \cdot P(A/B)$$

$$\Rightarrow P(B_i \mid A) = \frac{P(B_i) \cdot P(A/B_i)}{P(A)} \dots \dots \dots (1)$$

Substitute P[A] in eqn (1)

$$(1) \Rightarrow P[B_i/A] = \frac{P(B_i) \cdot P(A/B_i)}{\sum_{i=1}^{n} P(B_i) P(A/B_i)} \mathsf{NEER}/\mathcal{VG}$$

#### Hence the proof.

1.(a) Four boxes A, B, C, D contain fuses. The boxes contain 5000, 3000, 2000 and 1000 fuses respectively. The percentages of fuses in boxes which are defective are 3%, 2%, 1% and 0.5% respectively.one fuse in selected at random arbitrarily from one of the boxes. It is found to be defective fuse. Find the probability that it has come from box D.

# LAM KORDAKUR

(b) Four boxes A, B, C, D contain fuses. Box A contain 5000 fuses, box B contain 3000 fuses, box C contain 2000 fuses and box D contain 1000 fuses. The percentage of fuses in boxes which are defective are 3%, 2%, 1% and 0.5% respectively. One fuse is select at random from one of the boxes. It is found to be defective fuse. What is the probability that it has come from box *D*.

#### **Solution:**

Since selection ratio is not given

Assume selection ratio is 1 : 1 : 1 : 1

Total = 1 + 1 + 1 + 1 = 4

$$\Rightarrow P(A) = \frac{1}{4}$$

$$\Rightarrow P(B) = \frac{1}{4}$$

$$\Rightarrow P(C) = \frac{1}{400}$$

$$\Rightarrow P(D) = \frac{1}{400}$$

Let E be the event selecting a defective fuse from any one of the machine

$$\Rightarrow P(E/A) = 3\% = 0.03$$

$$\Rightarrow P(E/B) = 2\% = 0.02$$

$$\Rightarrow P(E/C) = 1\% = 0.01 \text{RVE OPTIMIZE OUTSPREAD}$$

$$\Rightarrow P(E/D) = 5\% = 0.05$$

$$P(E) = P(A)P(E/A) + P(B)P(E/B) + P(C)P(F/C) + P(D)(F/D)$$

$$= \frac{1}{4} \times 0.03 + 1/4 \times 0.02 + 1/4 \times 0.01 + 1/4 \times 0.05$$

= 0.0275

$$P(D/E) = \frac{P(D)P(E/D)}{P(E)}$$

$$=\frac{\frac{1}{4}\times0.05}{0.0275}=0.4545$$

$$= 0.4545$$

2. (a) In a bolt Factory, Machines A, B and C manufacture respectively 25%, 35% and 40% of total output. also out of these output of A, B, C are 5, 4, 2 percent respectively are defective. A bolt is drawn at random from the total output and it is found to be defective. What is the probability that it was manufactured by the machine B?

**(OR)** 

(b) In a company machine A, B and C manufactured bolts, 25%, 35% and 40% of total output. also out of these output of A, B, C are 5,4,2 percent respectively are defective. A bolt is taken random from the total output and it is found to be defective. Find the probability that it was manufactured by the machine B?

### **Solution:**

Given  $P(E_1) = P(A) = 25\% = 0.25$ 

 $\Rightarrow P(E_2) = P(B) = 35\% = 0.35$ 

$$\Rightarrow P(E_3) = P(C) = 40\% = 0.40$$

Let *D* be the event of drawing defective bolt

3. (a) A bag A contains 2 white and 3 red balls and a bag B contains 4 white and 5 red balls. One ball is drawn at random from one of the bag and is found to be red. Find the Probability that it was drawn from bag B

(OR)

(b) A box A contains 2 white and 3 red balls and a box B contains 4 white and 5 red balls at random one ball is taking and is found to be red. What is the probability that it was drawn from bag B?

## Solution:

Let  $B_1$  be the event that the ball is drawn from the bag A.

Let  $B_2$  be the event that the ball is drawn from the bag B.

Let A be the event that the drawn ball is red

$$\Rightarrow P(B_1) = P(B_2) = \frac{1}{2}$$

$$\Rightarrow P(A/B_1) = \frac{3C_1}{5C_1} = \frac{3}{5}$$

$$\Rightarrow P(A/B_2) = \frac{5C_1}{9C_1} = \frac{5}{9}$$

$$P(B_{2}/A) = \frac{P(B_{2})P(A/B_{2})}{P(B_{1})P(A/B_{1}) + P(B_{2})P(A/B_{2})}$$

$$OBSERVE OPTIMIZE OUTSPREND$$

$$= \frac{\binom{1}{2}\binom{5}{9}}{\binom{1}{2}\binom{3}{5} + \binom{1}{2}\binom{5}{9}}$$

$$=\frac{\frac{5}{18}}{\frac{52}{90}}$$

$$\Rightarrow P(B_2/A) = \frac{25}{52}$$
